

GMTN
GLOBAL MEDICAL TRAINING NETWORK

ABOUT GMTN

Global Medical Training Network (GMTN) was established to offer health practitioners and physicians worldwide access to the finest, on-going, leading edge training in breakthrough evidenced-based technologies and techniques that aim to evolve medicine.

The materials, technology, products and workshops are designed to train physicians specifically in cutting-edge concepts, integrative, regenerative and concepts that promote longevity as well as real results.

GMTN has international experts in the fields of cosmetics, orthopedics, anti-aging and advanced bio-technology. We offer trainings for Intravenous Laser Therapy and Laser acupuncture, Stem Cell Therapies, Bio-identical Hormone Replacement, Advanced Organic Non-surgical Cosmetics, Integrative Oncology and integrative orthopedics.

GMTN serves as a union of physicians with a focus that is based on evidence, integrity and progress.

TRAINING COURSES

ADVANCES IN STEM CELL THERAPY

This is a highly sought after two day training program with a primary focus on Autologous Adipose Stem Cell Therapy, a safe and proven technology for orthopaedic, cosmetic, anti-aging and chronic diseases. This training program teaches practitioners the practical information on the extraction, processing and applications of stem cells from Autologous Adipose Stem Cells, bone marrow, PRP and Mesenchymal Stem Cells from Wharton Jelly.

Day one includes a seminar on the fundamentals of stem cell therapy and its various applications. Day two incorporates an observation of two stem cell surgical procedures with instructions on cell extraction, cell separation, cell activation and cell administration.

APPLYING MESENCHYMAL STEM CELLS (MSC) TO YOUR PRACTICE

A four hour FREE training session where you will discover how mesenchymal stem cells can be used in a non-surgical setting where the patient can receive an intravenous drip of stem cells in less than an hour. The main purpose of this program is to teach doctors about the safety, effectiveness and application of MSC.

MSCs are showing great potential in the fields of regenerative medicine, tissue engineering and gene therapy. They can differentiate into a variety of cell types, including bone, cartilage, muscle, nerve and many others. Scientists have developed proven methods for the expansion of cord tissue stem cells, allowing a potentially unlimited supply of this powerful resource.

DOCTOR'S PROFILE

DR. RICHARD DEANDREA

Dr. DeAndrea is an American trained surgeon graduating from Cornell University. After teaching as a professor at the American University of Complementary Medicine, Dr. DeAndrea was appointed the Medical Advisor of Stem Cell Therapy for Lab Dom, Switzerland and was appointed to train the US Military doctors in stem cell therapy.

He has successfully pioneered one of the first integrated medical institutes in Asia and is a certified stem cell instructor for the National Innovations Association of Thailand.

Dr DeAndrea has successfully trained over 100 physicians from 39 countries in approved stem cell therapy techniques that have successfully treated over 5,000 people.

DR. RHETT BOSNICH

Dr. Bosnich is a leading authority in Hair Restoration Surgery and Cosmetic Regenerative Medicine within the Australasian region. He specialises in both FUG (donor strip surgery) and FUE (manual and motorised). Dr. Bosnich comes from a strong medical research background and possesses over 19 years of experience as a Medical Practitioner in Australia.

Dr. Bosnich served as the Medical Director and Principal Hair Transplant Surgeon of National Hair Institute (NIH) in Australia from January 2007 until June 2012.

Dr. Bosnich has great passion in the development of PRP and stem cell techniques for hair restoration and cosmetic rejuvenation.

Dr. Bosnich's clinical work and professional reputation has contributed to the changing perception of the Cosmetic Hair Restoration industry. He achieved his career goal of obtaining prestigious International recognition as a graduate from the American Board of Hair Restoration Surgery (ABHRS).

DR. MICHAEL WEBER

Dr. Michael Weber has more than 20 years experience as a medical practitioner, certified bio-chemist and a medical doctor in Germany. During this time, he has been a leader of three medical centers for general and internal medicine, pain, acupuncture and cancer treatment.

Furthermore, Dr. Weber is working on many researches with different national and international institutions and universities. He is the president of the International Society for Medical Laser Applications and the editor-in-chief of the International Journal for Medical Laser applications.

Dr. Weber is also the co-editor of the German Journal - Pain and Acupuncture and is on the editorial board of Medical Acupuncture, the official journal of the American Association for Medical Acupuncture (AAMA).

TRAINING COURSES

EXPANDING YOUR PRACTICE IN WEBER LASER THERAPY TRAINING

A one day FREE workshop training in Bangkok with Dr. Weber on the use of the intravenous Webber Laser Therapy Device (a cold laser treatment of the blood). This device can lead to energizing, immune-enhancing and metabolic optimization and thus, offering a very successful way to treat a variety of intractable diseases.

The Weber Laser technology is successfully used in different areas of medicine including; pain management, rehabilitation dermatology, dentistry, neurology, orthopaedics, acupuncture, intra-articular and interstitial laser therapy.

BREAKTHROUGHS IN HAIR RESTORATION

A one day program that covers the latest non-surgical breakthroughs in Hair Restoration using stem cells and PRP. One of Australia's leading experts will explain the use of this safe and effective autologous stem cell technology.

BREAKTHROUGHS IN FACIAL REJUVENATION

A one day program that covers the latest technological breakthroughs in Facial Rejuvenation using stem cells, PRP and micro-needling. One of Australia's leading cosmetic surgeons will teach this safe and effective autologous stem cell technology.
